2.If the given table is as shown below

Id	Name	Salary
1	Ashish	15.20
2	Sunita	10.6
3	Savita	11.55
4	Kavita	12.12

Write a query to generate table as shown below. And display messages

Id	1	2	3	4
Name	Akshay	Samantha	Julia	Scarlet
Salary	15.20	10.6	11.55	12.12
Friend Id	2	3	4	1
Friends Salary	10.06	11.55	12.12	15.20

Output should be following messages

• Samantha's best friend got offered a higher salary than her at 11.55

• Julia's best friend got offered a higher salary than her at 12.12

• Scarlet's best friend got offered a higher salary than her at 15.2

Q2. You are given two tables: Students and Grades. Students contains three columns ID, Name and Marks.

Column	Type
ID	int
Name	String
Marks	Int

Grades contains the following data:

Grade	Min_marks	Max_marks
1	0	9
2	10	19
3	20	29
4	30	39
5	40	49
6	50	59
7	60	69
8	70	79
9	80	89
10	90	100

Sanjay gives a task to Gauri. He asked to generate a report containing three columns: Name, Grade and Mark. Sanjay doesn't want the NAMES of those students who received a grade lower than 8.

The report must be in descending order by grade -- i.e. higher grades are displayed first. If there is more than one student with the same grade (8-10) assigned to them, order those particular students by their name alphabetically. Finally, if the grade is lower than 8, use "NULL" as their name and list them by their grades in descending order. If there is more than one student with the same grade (1-7) assigned to them, order those particular students by their marks in ascending order.

Sample Input

Id	Name	marks
1	Tejswini	88
2	Shalini	68
3	Ashu	99
4	Sonam	78
5	Amruta	63
6	Deepa	81

Sample output

Ashu	10	99	
Deepa	9	81	
Tejswini	9	88	
Sonam	8	78	
Null	7	68	
Null	7	63	

Note

Print "NULL" as the name it the grade is less than 8. Explanation

So, the following students got 8. 9 or 10 grades:

- Ashu (grade 10)

- Deepa (grade 9)

- Tejswini (grade 9)

• Sonam (grade 8)

2. Write a SQL query to find students who got more than 50 marks in all subjects.
